

MINIMODULO

VENTILATED ROOFS

Minimodulo

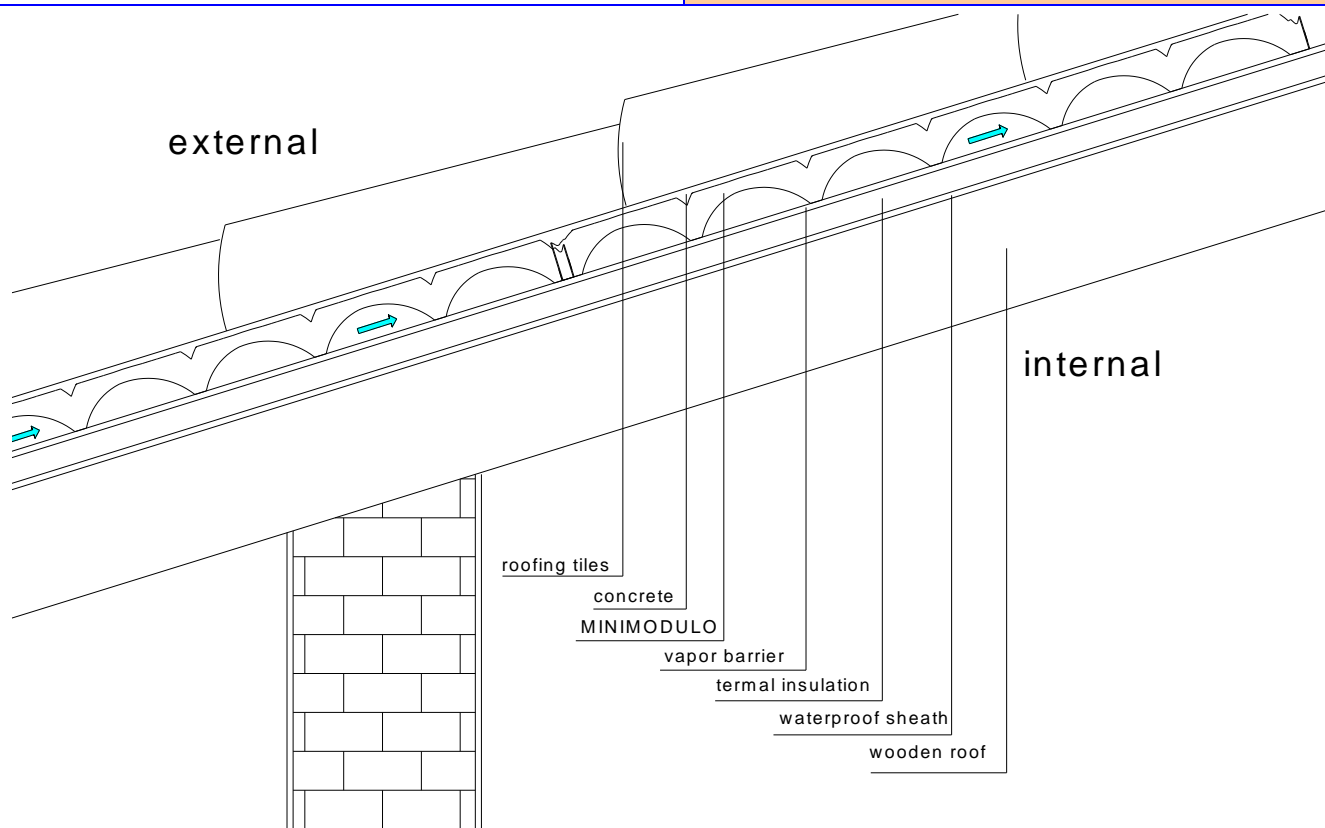

Minimodulo is used to create ventilated roofs that reduce heat transmission and the temperature difference between the inner and the outer side of the roof.

The system also eliminates moisture and condensation between the roof tile and the waterproofing.

The shape of the forming system guarantees a high load bearing capacity.

Advantages

- Natural ventilation
- Removes moisture and condensation
- Decreases the weight of the roof
- Reduces heat transmission
- High load-bearing capacity of the structure

Applications:

Ventilated slanted roofs

Flat roofs

Green roofs
